Surgery, W8 6HH

Prescriber GMC Reg: 7294018

Clinical Assessment Summary & Eligibility Verification

Ms Rowe enrolled in the Bloomsbury Digital Health seasonal allergy management plan via our digital consultation pathway. She submitted an asynchronous clinical consultation questionnaire, verified by identity authentication and prescriber review on 08 September 2026.

Clinical Indication & Symptom Profile

- **Primary Indication:** Moderate-to-Severe Seasonal Allergic Rhinitis (Hay Fever) with Allergic Rhinoconjunctivitis (ICD-10: J30.1).
- **Reported Symptoms:** Persistent bilateral nasal congestion, severe paroxysmal sneezing, clear rhinorrhoea, pruritus of the soft palate, and bilateral conjunctival hyperaemia with ocular pruritus and epiphora during peak tree and grass pollen seasons.
- **Functional Impact:** Disturbed sleep architecture, daytime fatigue, and impaired concentration during professional work hours.
- **Safety Screening & Exclusion of Red Flags:** Negative for unilateral symptoms, recurrent spontaneous epistaxis, purulent nasal discharge, visual acuity deficits, facial numbness, or periorbital swelling. Patient is not pregnant or breastfeeding.

Safety Profile & Concurrent Medications

- **Known Allergies / Sensitisations:** Pollen (tree/grass); no adverse reactions to oral antihistamines or topical corticosteroids.
- **Concurrent Prescriptions:** Combined oral contraceptive pill (Microgynon 30); nil interacting medications.
- **Relevant Medical History:** Mild seasonal eczema (managed conservatively with emollient creams). Nil history of glaucoma, ocular hypertension, or cardiac arrhythmias.

Authorised Medication Schedule (Electronic Private Inscription)

The following medicinal products have been clinically approved under this subscription protocol, to be dispensed on a rolling 90-day dispatch schedule:

Pharmaceutical Product	Strength / Form	Prescribed Dosage & Regimen	Quant
Fexofenadine HCl	120 mg film-coated tablets	Take 1 tablet daily with water, before meals	90 tabl
Mometasone Furoate	50 mcg/actuation nasal spray	2 actuations into each nostril once daily	2 bottl
Sodium Cromoglicate	2.0% w/v ophthalmic drops	1–2 drops into each eye four times daily PRN	2 × 13.

Subscription Logistics & Dispensing Terms

1. **Dispensing Schedule:** First package dispensed immediately upon payment authorization. Subsequent 90-day cycles generate an automatic clinical check-in prompt 10 days prior to dispatch.
2. **Ongoing Clinical Monitoring:** Continuation of the subscription is contingent upon completion of a mandatory 3-question symptom control and adverse-effects questionnaire at each billing cycle.
3. **Annual Review:** An annual formal clinical re-evaluation by an Independent Prescriber is required every 12 months in accordance with GPhC remote prescribing standards.
4. **Information Sharing with NHS GP:** In compliance with GMC guidance on good practice in prescribing and managing medicines, an automated notification of these ongoing private supplies has been transmitted via electronic mesh to St Mary Abbots Surgery.

Safety Netting & Patient Advisory Guidance

- **Administration Technique:** For mometasone spray, shake well before use, tilt head slightly forward, and direct the nozzle laterally away from the nasal septum to reduce mucosal irritation.
- **Red Flags for Urgent Review:** If the patient experiences visual disturbances (e.g., blurred vision), persistent unilateral bleeding, secondary bacterial sinusitis (unilateral facial pain with fever), or signs of systemic hypersensitivity, therapy must be stopped and medical advice sought immediately via NHS 111 or GP surgery.
- **Cancellation Policy:** The patient may pause, adjust, or cancel the subscription at any time with 7 days' notice prior to the next scheduled dispatch date via the online portal.
